Java & Backend Developer with 5 years in Enterprise Backend Engineering, Middleware, Agentic AI, and Automation.

TECHNICAL SKILLS

Languages: Java, Python, SQL

Frameworks / Tools: Spring Boot, REST APIs, LangChain, LangChain4j, GPT-4o, MCP, Hibernate, Maven, JUnit

Enterprise / DevOps: Middleware, DB2, XML, Git, Bit Bucket, Unix, Jira, Jenkins, IntelliJ, Eclipse, VS Code, Google Colab

PROFESSIONAL EXPERIENCE

Accenture - Custom Software Engineering Senior Analyst

Jul 2021 - Present

Client: Bank of America | Focus: Java backend, Middleware, Secure Integrations, Gen AI automation

PROJECT EXPERIENCE

Request Processor Integrator - Middleware Application

- Developed and maintained message-oriented middleware for enterprise routing, secure application communication, data transformation, and transaction flow stability.
- Developed **Rest APIs** for a Transaction Management Portal using **Spring-boot**, Spring MVC and Spring JPA.
- Improved **Log4j** logging by adding meaningful error messages, transaction context, and appropriate log levels, enabling faster troubleshooting and root-cause analysis.
- Enhanced **Exception handling** across multiple transaction-processing flows, improving error identification, failure recovery, and production support.
- Implemented routing updates for **SWIFT** mandates changes, modifying middleware flows and validating transaction routing across impacted applications.
- Developed test cases for the application using Junit
- Worked on setting up connectivity between applications using **Secure File Transfer Protocol** and

Connect-Direct

- Supported production issues, releases, and deployment validation while coordinating with application, infrastructure, release, and security teams.
- Developed a POC to implement a **RAG** using python and **langchain** framework to generate DTS documents to help in easing the process of production release and reducing the time required by 20%.

AI Powered Transaction Search Agent

- Designed and integrated an Agentic AI natural-language search capability into a transaction management portal using Java Spring Boot, **MCP**, **LangChain4j**, and Azure OpenAI, GPT-4o, enabling operations teams to query transaction records in plain English while the agent selected SQL generation or summary aggregation tools based on intent.
- Validated with 30 domain-specific queries, achieving 90%+ SQL accuracy before each release, with production monitoring for zero-result rate, latency, and user feedback.

EDUCATION

M.Tech (Online), Artificial Intelligence and Data Science - IIIT Kottayam | 2024 - 2027

B.Tech, Information Technology - MVGR College of Engineering, Vizianagaram | 2017 - 2021 | CGPA: 8.48

CERTIFICATIONS & AWARDS

Gen AI Fundamentals - Accenture | Azure AI Fundamentals AI-900 - Microsoft | ACE Award - Accenture
